2024.06.11 | 그랜드 인터컨티넨탈 서울 파르나스

자율주행 소프트웨어 개발을 위한 모델기반 시스템 엔지니어링에 대한 사례

이동한 책임연구원, HL Klemove

Background

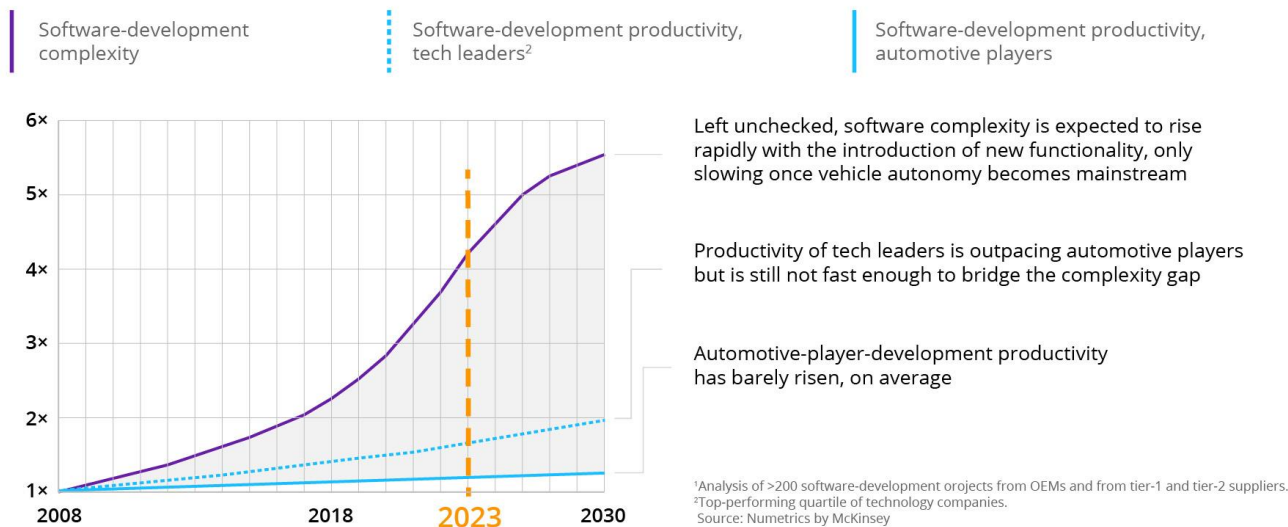

Need to Change SW Development Methods

Growing complexity of automotive software and a demand for **more and more features** in a **shorter timeframe**.

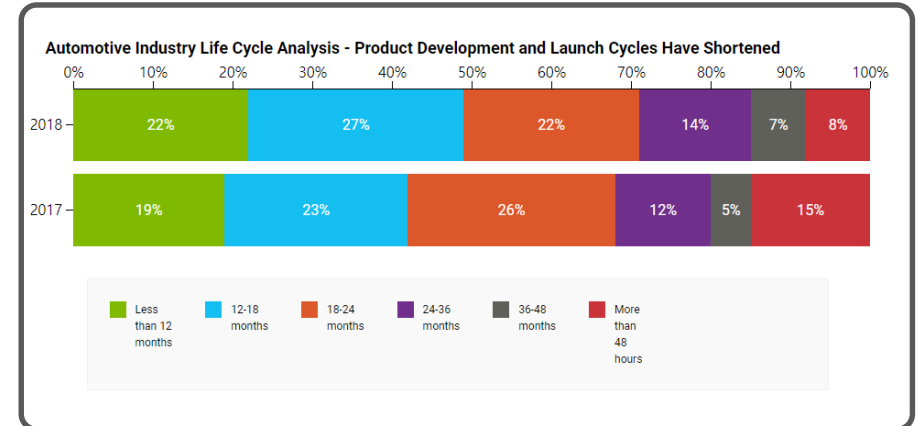

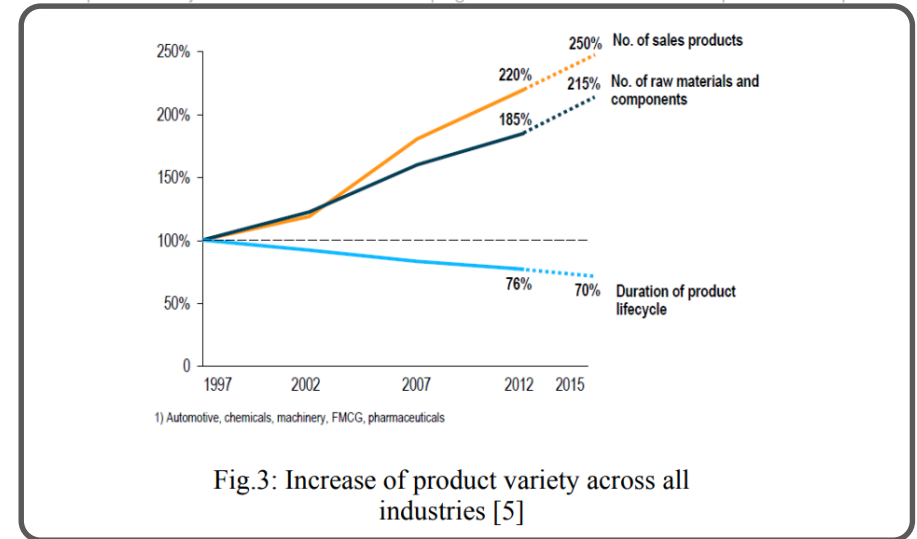

The increase in complexity is **outpacing** our improvements in efficiency

Relative growth over time, for automotive features,¹ indexed, 1 = 2008

Background

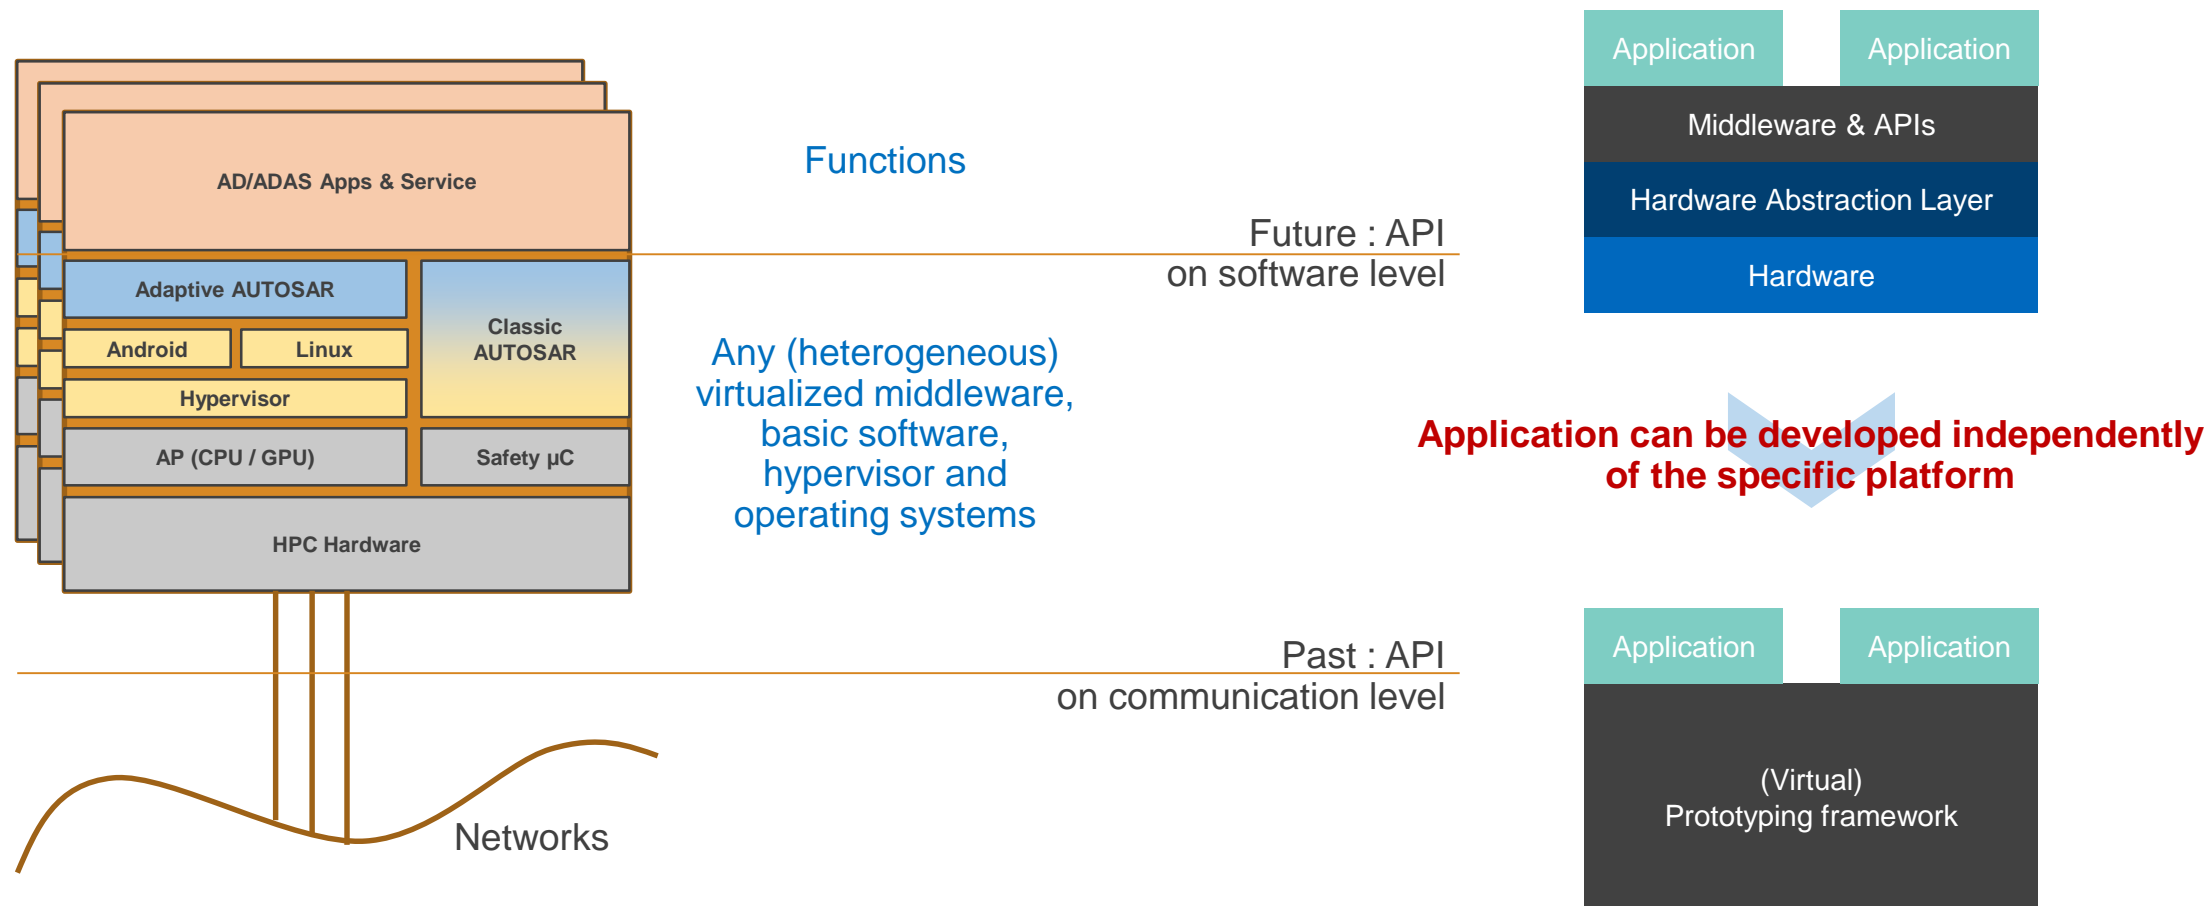

- Parallel Development Process

Background

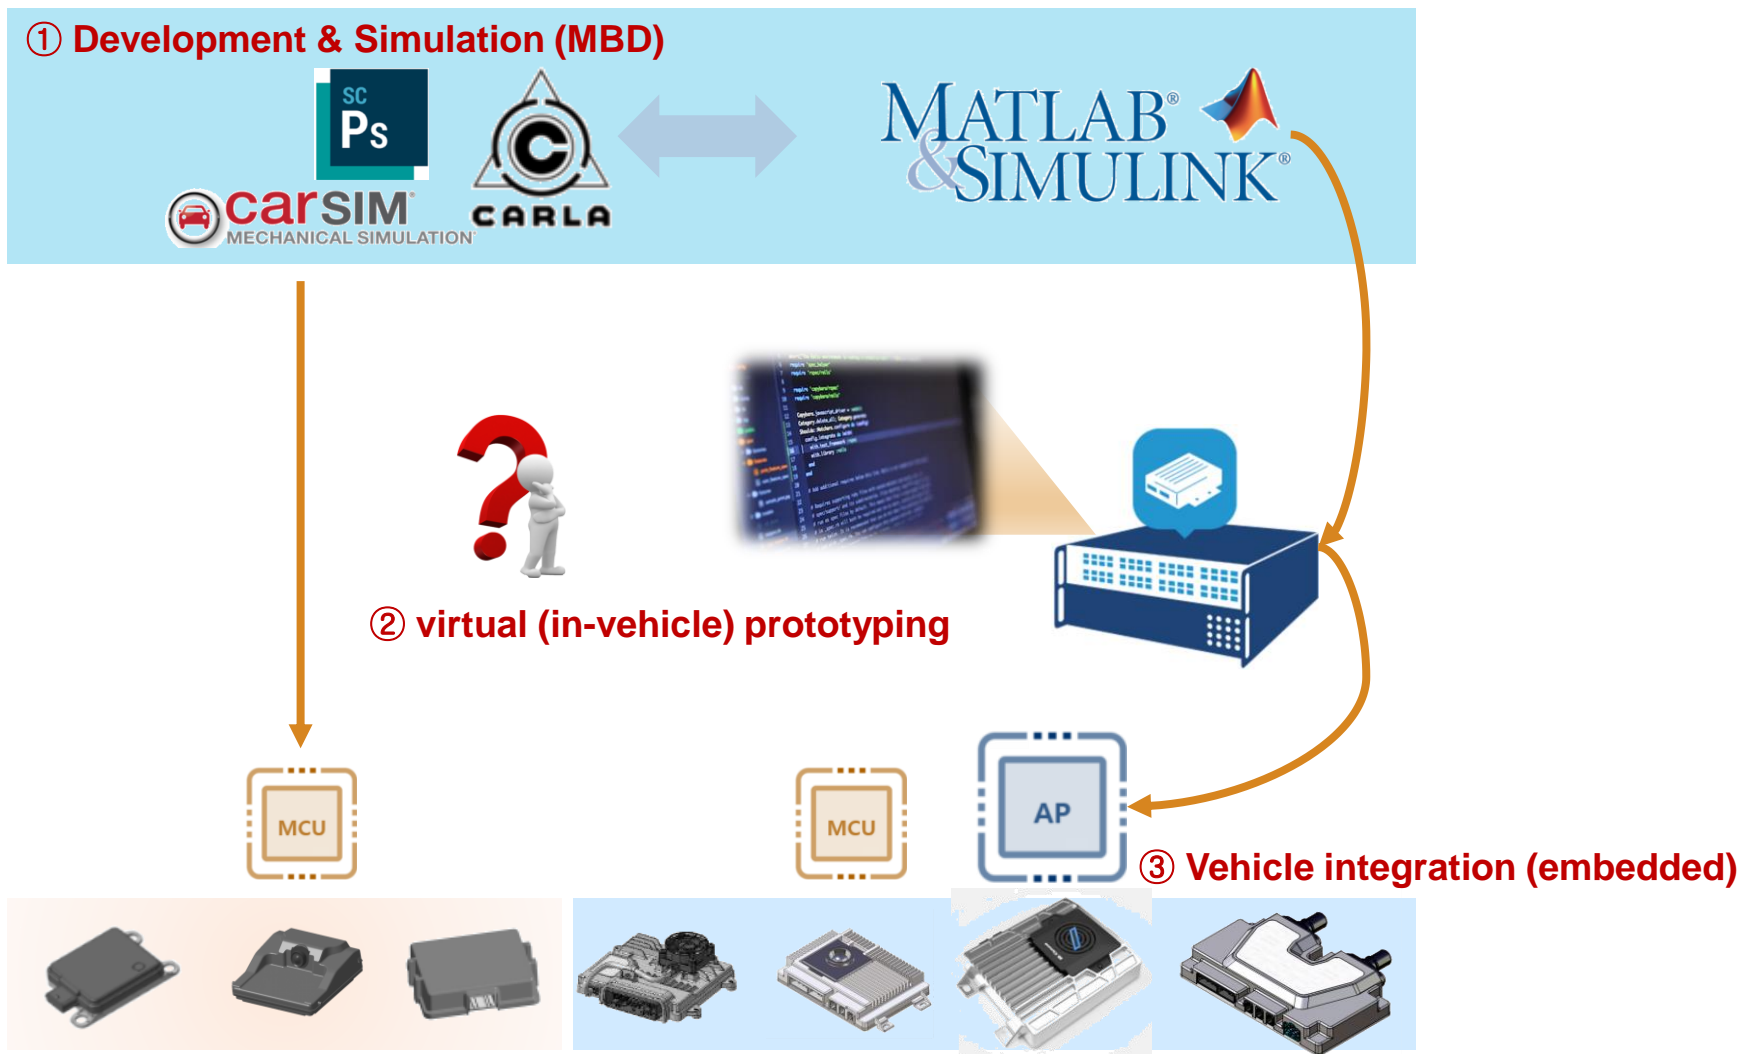

- Virtualization

We need to define the **API on the software architecture!** This build the basis for **virtualization**

Background

- Virtual Prototyping Framework

Limited to development or testing of basic functions

Background

- Development Process with Some Use Cases

Algorithm Development on cross-platform prototyping framework

- Purely theoretical and mathematical domain
- PC-based development

ROS

Prototyping framework

Embedded Software Development on embedded target

- Depends on hardware architecture
- Performance and power consumption are essential

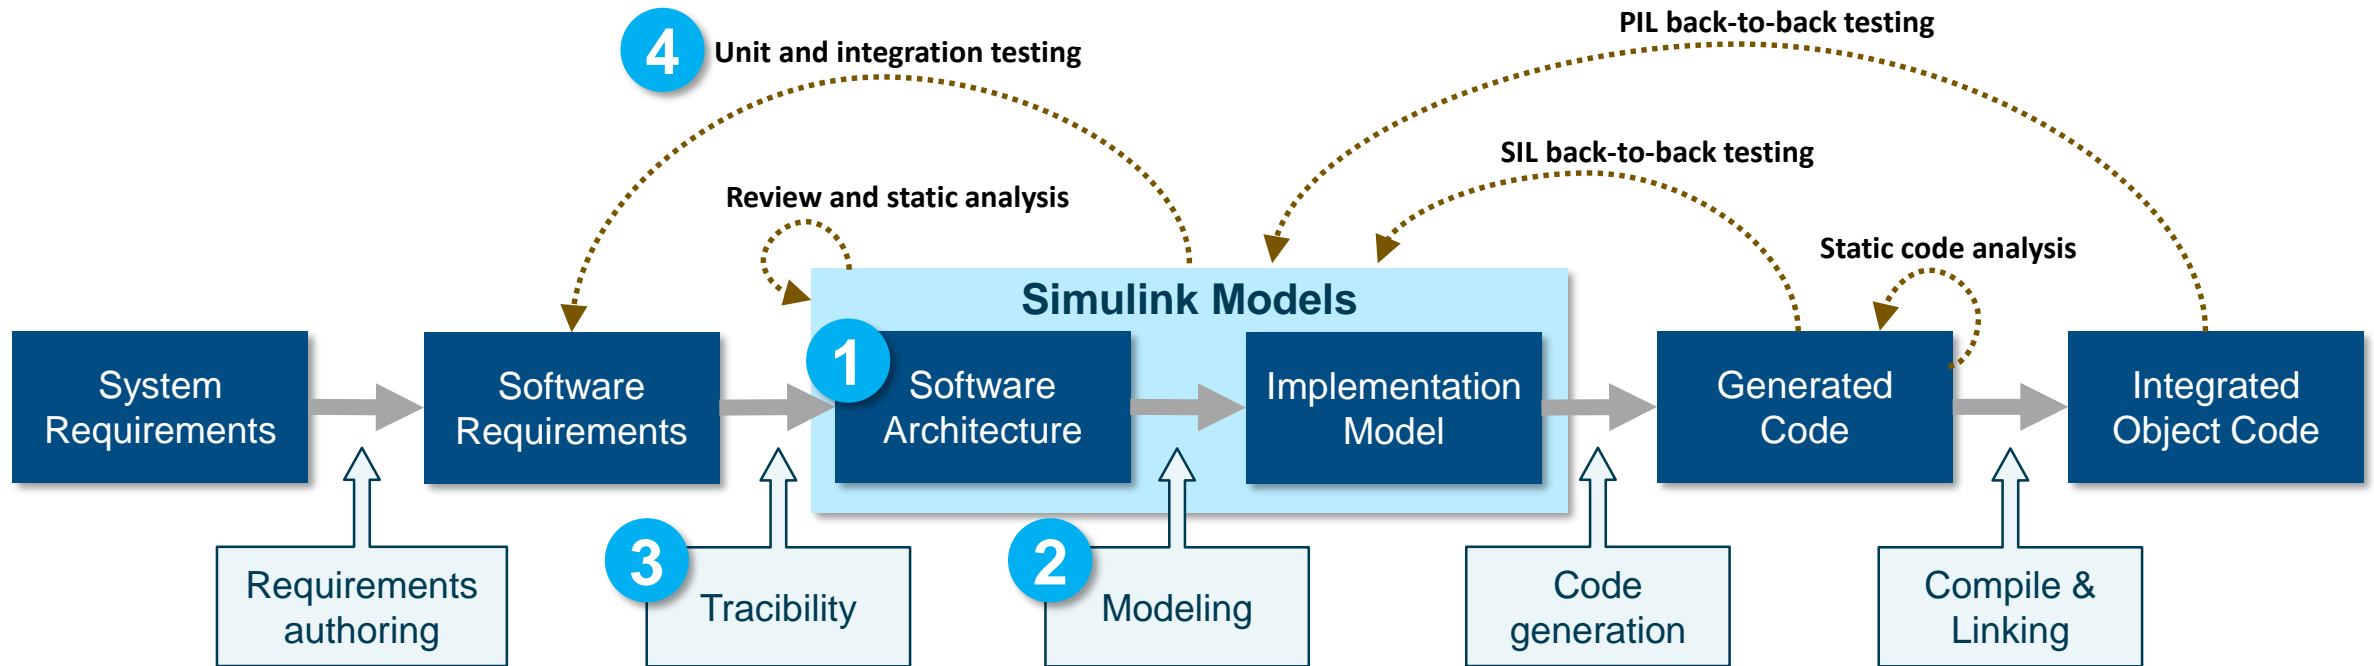

ADAS Domain Controller

Challenge

- Workflow using Model-Based Design**

1 Software architecture authoring & management

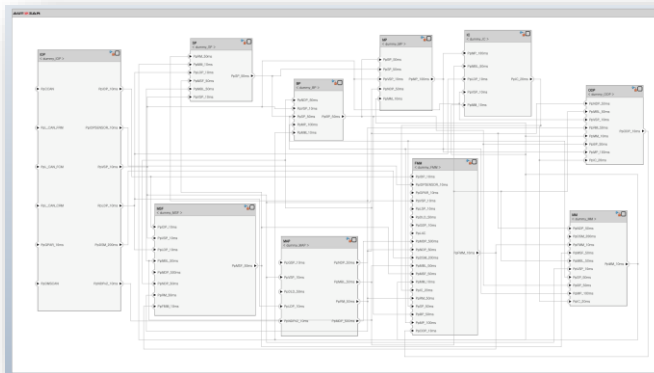

2 Manually updated ROS wrapper

3 Ensuring tracibility between requirements and software

4 Simulation-in-the-Loop

Solution

- 1 SW Architecture Authoring using System Composer & AUTOSAR Component Designer
- 2 Customized Wrapper Generator
- 3 Tracibility using Requirements Toolbox
- 4 Improve Speed & Flexibility of SILs with Linux Runtime Manager

System Composer

```

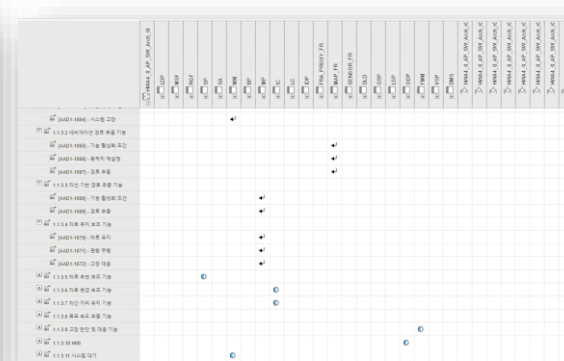

%% configurations before code gen
NodeName = "BP"
NodeHz = "20"

modelName = 'MMA_Architecture'; %append(NodeName, '_wrapper_new_240108');
profileName = 'SM_Arch_Profile';

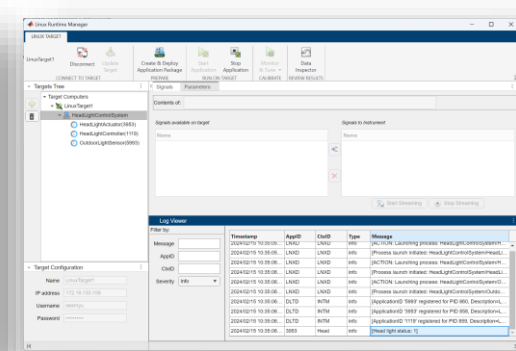

if NodeName == "MP"
    WrapperCFile = append('MotionPlanner_Wrapper_ROS.cpp');
    WrapperHeader = append('MotionPlanner_Wrapper_ROS.h');
elseif NodeName == "BP"
    WrapperCFile = append('BehaviorPlanner_Wrapper_ROS.cpp');
    WrapperHeader = append('BehaviorPlanner_Wrapper_ROS.h');
else
    WrapperCFile = append(NodeName, '_wrapper_ROS.cpp');
    WrapperHeader = append(NodeName, '_wrapper_ROS.h');
end
WrapperFolderName = 'wrappergen';

codegenDirName = append(modelName, '_ert_rtw');
ProjectInfo = currentProject; % Simulink Project Information object
CodeGenFolder = ProjectInfo.SimulinkCodeGenFolder; % code generation folder
WorkFolder = fileparts(CodeGenFolder); % working folder
  
```

Customized Wrapper Generator
